4 ARCHITECTURAL DESCRIPTION & INTEGRITY

Building Type and/or Style: T/L cottage
No. Stories: 1
Additions: ☐ none ☑ minor ☐ major (describe below)
Alterations: ☐ none ☑ minor ☐ major (describe below)
Number of associated outbuildings and/or structures: ☐ accessory building(s), # _____; ☐ structure(s), # _____.

General Condition of Exterior Materials:

Researcher/Organization: Dina Blaes/Park City Municipal Corporation Date: November, 08
☐ Good (Well maintained with no serious problems apparent.)
☑ Fair (Some problems are apparent. Describe the problems.): General disrepair.
☐ Poor (Major problems are apparent and constitute an imminent threat. Describe the problems.): 
☐ Uninhabitable/Ruin

Materials (The physical elements that were combined or deposited during a particular period of time in a particular pattern or configuration. Describe the materials.):

Site: Large lot by Park City standards.
Foundation: Not verified, but likely wooden sills or no foundation.
Walls: Drop siding.
Roof: Cross-wing roof form sheathed in multiple materials-shingles, tar paper, wood decking.
Windows/Doors: Two-over-two double-hung sash type.

Essential Historical Form: ☑ Retains  ☐ Does Not Retain, due to:

Location: ☑ Original Location  ☐ Moved (date __________) Original Location:

Design (The combination of physical elements that create the form, plan, space, structure, and style. Describe additions and/or alterations from the original design, including dates—known or estimated—when alterations were made): The one-story frame house is unchanged in general description from what is described in the 1983 National Register nomination form (See Structure/ Site Form, 1983). The site has deteriorated beyond what is seen in the 1983 photographs and has not been properly maintained.

Setting (The physical environment—natural or manmade—of a historic site. Describe the setting and how it has changed over time.): The setting is unchanged from early tax photos and the description given in the 1983 National Register nomination form.

Workmanship (The physical evidence of the crafts of a particular culture or people during a given period in history. Describe the distinctive elements.): The physical evidence from the period that defines this as a typical Park City mining era house are the simple methods of construction, the use of non-beveled (drop-novelty) wood siding, the plan type, the simple roof form, the informal landscaping, the restrained ornamentation, and the plain finishes.

Feeling (Describe the property's historic character.): The physical elements of the site, in combination, convey a sense of life in a western mining town of the late nineteenth and early twentieth centuries.

Association (Describe the link between the important historic era or person and the property.): The "T" or "L" cottage (also known as a "cross-wing") is one of the earliest and one of the three most common house types built in Park City during the mining era.

This site was listed on the National Register of Historic Places in 1984 as part of the Park City Mining Boom Era Residences Thematic District. It was built within the historic period, defined as 1872 to 1929 in the district nomination, and retains its historic integrity. As a result, it meets the criteria set forth in LMC Chapter 15-11 for designation as a Landmark Site.

5 SIGNIFICANCE

Architect: ☑ Not Known  ☐ Known: (source: )  Date of Construction: c. 1895

Builder: ☐ Not Known  ☐ Known: (source: )

The site must represent an important part of the history or architecture of the community. A site need only be significant under one of the three areas listed below:

1 Utah State Historical Society, Structure/Site Form, 1984.
1. Historic Era:
   - Settlement & Mining Boom Era (1868-1893)
   - Mature Mining Era (1894-1930)
   - Mining Decline & Emergence of Recreation Industry (1931-1962)

   Park City was the center of one of the top three metal mining districts in the state during Utah's mining boom period of the late nineteenth and early twentieth centuries, and it is one of only two major metal mining communities that have survived to the present. Park City's houses are the largest and best-preserved group of residential buildings in a metal mining town in Utah. As such, they provide the most complete documentation of the residential character of mining towns of that period, including their settlement patterns, building materials, construction techniques, and socio-economic make-up. The residences also represent the state's largest collection of nineteenth and early twentieth century frame houses. They contribute to our understanding of a significant aspect of Park City's economic growth and architectural development as a mining community.²

2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):

3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect):

Dennis, Gladys. Telephone interview, January 25, 1984, Park City, Utah.

**Researcher:** Roger Roper  

**Date:** 4/84
Architect/Builder: Unknown
Building Materials: Wood
Building Type/Style: T/L Cottage

Description of physical appearance & significant architectural features:
(Include additions, alterations, ancillary structures, and landscaping if applicable)

This house is a one story frame T/L cottage with a gable roof, and shed
additions attached to the south and east sides of the building. A simple
porch spans the length of the stem-wing and wraps around the northwest corner
of the building, terminating at an extension of the rear shed addition. A
pair of two over two double hung sash windows are set into the gable end of
the cross-wing, and a door opens off the porch into the west wall of the
cross-wing. A door and a one over one double hung sash window open into the
stem-wing. There are two other doors in addition to the two previously
described. One opens off the porch into the west wall of the stem-wing, and
the other opens into the east shed extension. The latter is flanked by a
window similar to those on the gable end of the cross-wing. The square window
in the west wall may not be original, but it is not intrusive. The shed
additions are the only obvious major alterations of the original house. An
addition was made to a rear extension, as is indicated by a seam between the
two sections. The additions were probably added early in the building's
history because they are complementary in scale and materials. In-period rear
additions are part of Park City's architectural vocabulary. Although in many
cases an addition represents a major alteration of the original house, it
usually contributes to the significance of a house because it documents the
(See continuation sheet)

Statement of Historical Significance:

Built c. 1895, the house at 622 Rossie Hill Drive is architecturally
significant as one of 78 extant T/L cottages in Park City, 17 of which are
included in this nomination. The T/L cottage is one of the three most common
house types built during the early period of Park City's mining boom era, and
significantly contributes to the character of the residential area.

This house was built by at least 1907, as indicated by the Sanborn Insurance
Maps which first covered this area that year, having probably been constructed
in the 1890s, the years of greatest popularity of the T/L cottage house type
in Park City. Due to incomplete ownership records, the name of the original
owner and the date of construction of this house are not known. The 1910
census records, which give corresponding addresses to many of the households
surveyed in Park City, fail to give an address that can be identified with
this house, so they were of little use in determining who the owner of this
house was at that time.

This area, located east of town along the road to Deer Valley, was sparsely
populated and, according to the census records, the houses here were primarily
owner-occupied by laborers, teamsters, miners, etc. and their families. This
house was purchased in the late 1920s or early 1930s by William Wood, father
and grandfather of the current owners.  Wood lived next door at 652 Rossie
Hill Drive and rented out this and three neighboring houses, which he had also
purchased (623 Deer Valley Road, and 622 and 660 Rossie Hill Drive).

1Telephone interview with Gladys Dennis, Park City, Utah,
622 Rossie Hill Drive
Description continued:

most common and acceptable method of expansion of the small Park City house. This house is one of very few Park City houses that were expanded laterally. Because the building lots were narrow and there was a great demand for housing, houses were built close together. When expanded, additions were made in the form of a cross-wing, or a rear shed extension. Lateral additions in the town proper were generally no larger than the width of a porch. Because this house was built in an open area, additional expansion to the side was possible. The expansion of 622 Rossie Hill Drive is more akin to the type that one finds in Eureka, a mining town in the Tintic Mining District that was developed in a more open area than Park City. The unusual additions do not adversely affect the character of the building, but serve to distinguish this example of the common T/L cottage from others of the type.

Legal Description continued:

30 degrees 10 minutes West 104.72 feet; North 148.54 feet; South 89 degrees 58 minutes 38 seconds West 1,319.18 feet to beginning; less other properties described in tax file #PC-750-1-X, leaving a balance of 0.47 acres. Also known as the 13th house on the South side of Deer Valley Road.

.47 acre.
