4 ARCHITECTURAL DESCRIPTION & INTEGRITY

Building Type and/or Style: Other residential type / Period Revival: Other style

No. Stories: 1

Additions: ☑ none ☐ minor ☐ major (describe below)
Alterations: ☑ none ☐ minor ☐ major (describe below)

Researcher/Organization: Preservation Solutions/Park City Municipal Corporation  Date:  Dec. 2008
Number of associated outbuildings and/or structures: ☐ accessory building(s), # _____; ☑ structure(s), # __1__.

General Condition of Exterior Materials:

☑ Good (Well maintained with no serious problems apparent.)
☐ Fair (Some problems are apparent. Describe the problems.):
☐ Poor (Major problems are apparent and constitute an imminent threat. Describe the problems.):
☐ Uninhabitable/Ruin

Materials (The physical elements that were combined or deposited during a particular period of time in a particular pattern or configuration. Describe the materials.):

Site: Low stacked stone retaining wall.
Foundation: The foundation appears from the 2006 photographs to be concrete.
Walls: The exterior walls are clad in aluminum siding.
Roof: The roof appears to be sheathed in metal shingles.
Windows/Doors: The façade windows have a central fixed pane flanked by vertical panes, presumably casements. The sash material cannot be determined from the available photographs.

Essential Historical Form: ☑ Retains ☐ Does Not Retain, due to:

Location: ☑ Original Location ☐ Moved (date __________) Original Location:

Design (The combination of physical elements that create the form, plan, space, structure, and style. Describe additions and/or alterations from the original design, including dates—known or estimated—when alterations were made): The house had its essential shape at the time of the c. 1940 tax photo and was clad in stucco. The visible changes made to the house include the addition of shutters to both gable end wall windows, aluminum siding to the exterior walls, the beaded spindle triangular ornament on the gable end and the turned porch support.

Setting (The physical environment—natural or manmade—of a historic site. Describe the setting and how it has changed over time.): The building lot slopes slightly up from the finished road grade to the house. A low stone retaining wall of regular coursed ashlar runs parallel to the street. The landscaping is informal with lawn and shrubbery. Like most of the historic neighborhoods in Park City, the overall setting is a compact streetscape with narrow side yards and other homes of similar scale within close proximity.

Workmanship (The physical evidence of the crafts of a particular culture or people during a given period in history. Describe the distinctive elements.): The physical evidence from the period that defines the typical Park City mining era home—simple methods of construction, simple roof form, informal landscaping, restrained ornamentation, and plain finishes—have been altered and, therefore, lost.

Feeling (Describe the property's historic character.): The physical elements of the site, in combination, do not effectively convey a sense of life in a western mining town of the late nineteenth and early twentieth centuries.

Association (Describe the link between the important historic era or person and the property.): The other residential type was a house type built in Park City during the mining era. however, the extent of the alterations to the main building diminishes its association with the past.

The extent and cumulative effect of alterations to the site render it ineligible for listing in the National Register of Historic Places.

5 SIGNIFICANCE
The site must represent an important part of the history or architecture of the community. A site need only be significant under one of the three areas listed below:

1. Historic Era:
   - Settlement & Mining Boom Era (1868-1893)
   - Mature Mining Era (1894-1930)
   - Mining Decline & Emergence of Recreation Industry (1931-1962)

   Park City was the center of one of the top three metal mining districts in the state during Utah's mining boom period of the late nineteenth and early twentieth centuries, and it is one of only two major metal mining communities that have survived to the present. Park City's houses are the largest and best-preserved group of residential buildings in a metal mining town in Utah. As such, they provide the most complete documentation of the residential character of mining towns of that period, including their settlement patterns, building materials, construction techniques, and socio-economic make-up. The residences also represent the state's largest collection of nineteenth and early twentieth century frame houses. They contribute to our understanding of a significant aspect of Park City's economic growth and architectural development as a mining community.\(^2\)

2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):

3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect):
