4 ARCHITECTURAL DESCRIPTION & INTEGRITY

Building Type and/or Style: Crosswing type / Vernacular style No. Stories: 1 ½
Additions: □ none ☑ minor □ major (describe below) Alterations: □ none ☑ minor □ major (describe below)
Number of associated outbuildings and/or structures: □ accessory building(s), # _____; □ structure(s), # _____.
General Condition of Exterior Materials:

Researcher/Organization: Preservation Solutions/Park City Municipal Corporation Date: 12-2008
Good (Well maintained with no serious problems apparent.)

Fair (Some problems are apparent. Describe the problems.):

Poor (Major problems are apparent and constitute an imminent threat. Describe the problems.):

Uninhabitable/Ruin

Materials (The physical elements that were combined or deposited during a particular period of time in a particular pattern or configuration. Describe the materials.):

Foundation: The foundation is not visible in the photographs and therefore its material cannot be verified.

Walls: Modern wooden board and batten vertical siding covers or replaces horizontal wooden drop (or novelty) siding as seen in the c. 1940 tax photo.

Roof: The cross-gabled roof is clad in modern shingles.

Windows/Doors: Original windows as seen in the c. 1940 tax photos of the projecting bay were simple wooden one-over-one double-hung windows. The current windows cannot be identified by the available photographs. The entry door is modern, wooden with nine lights in the top half.

Essential Historical Form: ☑ Retains  ☐ Does Not Retain, due to:

Location: ☑ Original Location  ☐ Moved (date __________) Original Location:

Design (The combination of physical elements that create the form, plan, space, structure, and style. Describe additions and/or alterations from the original design, including dates—known or estimated—when alterations were made): This is a frame one-and-a-half story cross-wing house in a vernacular style. The front-facing gabled dormer and the front deck with wooden balustered railing has been added at some point after 1940. The dormer is clad in wooden shingle siding and has a scroll cut “Swiss” feeling railing.

Setting (The physical environment—natural or manmade—of a historic site. Describe the setting and how it has changed over time.): Like most of the historic neighborhoods in Park City, the overall setting is a compact streetscape with other homes within close proximity. The surrounding houses are considerably larger than this example.

Workmanship (The physical evidence of the crafts of a particular culture or people during a given period in history. Describe the distinctive elements.): Though the distinctive elements that define the typical Park City mining era home—simple methods of construction, the use of non-beveled (drop-novelty) wood siding, the plan type (cross-wing), the simple roof form, the informal landscaping, the restrained ornamentation, and the plain finishes—have been altered or lost, the building retains its essential historical form.

Feeling (Describe the property's historic character.): Though the physical elements of the site that convey a sense of life in western mining town of the late nineteenth and early twentieth century have been altered, the site retains its essential historical form.

Association (Describe the link between the important historic era or person and the property.): The “T” or "L" cottage (also known as a "cross-wing") is one of the earliest and one of the three most common house types built in Park City during the mining era.

The extent and cumulative effect of the alterations render this site ineligible for the National Register of Historic Places.

5 SIGNIFICANCE

Architect: ☑ Not Known  ☐ Known: (source: )

Date of Construction: c. 1890

1 Summit County Recorder
The site must represent an important part of the history or architecture of the community. A site need only be significant under one of the three areas listed below:

1. Historic Era:
   - Settlement & Mining Boom Era (1868-1893)
   - Mature Mining Era (1894-1930)
   - Mining Decline & Emergence of Recreation Industry (1931-1962)

   Park City was the center of one of the top three metal mining districts in the state during Utah's mining boom period of the late nineteenth and early twentieth centuries, and it is one of only two major metal mining communities that have survived to the present. Park City's houses are the largest and best-preserved group of residential buildings in a metal mining town in Utah. As such, they provide the most complete documentation of the residential character of mining towns of that period, including their settlement patterns, building materials, construction techniques, and socio-economic make-up. The residences also represent the state's largest collection of nineteenth and early twentieth century frame houses. They contribute to our understanding of a significant aspect of Park City’s economic growth and architectural development as a mining community.²

2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):

3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect):

### 6 PHOTOS
