4 ARCHITECTURAL DESCRIPTION & INTEGRITY

Building Type and/or Style: Educational building / PWA Moderne style
No. Stories: 3
Additions: ☑ none ☐ minor ☐ major (describe below)
Alterations: ☑ none ☐ minor ☐ major (describe below)
Number of associated outbuildings and/or structures: ☐ accessory building(s), # ______; ☑ structure(s), # __1__.
General Condition of Exterior Materials:

Researcher/Organization: Preservation Solutions/Park City Municipal Corporation Date: 12-2008
Good (Well maintained with no serious problems apparent.)

☐ Fair (Some problems are apparent. Describe the problems.):

☐ Poor (Major problems are apparent and constitute an imminent threat. Describe the problems.):

☐ Uninhabitable/Ruin

Materials (The physical elements that were combined or deposited during a particular period of time in a particular pattern or configuration. Describe the materials.):

Site: Concrete stairway that runs from school building to Swede Alley is a significant site feature and should be preserved.

Foundation: Concrete.

Walls: Yellow brick, concrete, and terra cotta coping.

Roof: Flat roof with decorative parapets.

Windows/Doors: Multi-pane steel casement windows.

Essential Historical Form: ☐ Retains  ❑ Does Not Retain, due to:

Location: ☐ Original Location  ☑ Moved (date __________) Original Location:

Design (The combination of physical elements that create the form, plan, space, structure, and style. Describe additions and/or alterations from the original design, including dates—known or estimated—when alterations were made): The three-story brick school building has not been altered over the years and remains as it was described in the 1984 National Register nomination (see form attached).

Setting (The physical environment—natural or manmade—of a historic site. Describe the setting and how it has changed over time.): The setting has not been altered.

Workmanship (The physical evidence of the crafts of a particular culture or people during a given period in history. Describe the distinctive elements.): The physical evidence of the Public Works Administration Moderne style are the yellow brick, terra cotta coping and the decorative flame motif seen in the parapet elements and brick pilasters. These, and the groupings of windows are distinct elements of the main building. Also, the geometric patterns seen on the steps and the visual focus provided by the concrete steps are also distinct elements of the site.

Feeling (Describe the property's historic character.): The physical elements of the site, in combination, convey a sense of the public works sites, particularly the schools and school-related buildings, built in Park City in the 1930s.

Association (Describe the link between the important historic era or person and the property.): The Marsac Elementary School is one of only 7 public works buildings constructed in Summit County and is an example of New Deal projects in the state. Also, the site's association with prominent Utah architects, Carl W. Scott & George W. Welch.

This site was listed on the National Register of Historic Places in 1984 as part of the Public Works Buildings Thematic Resources District. It was built in 1935, retains its historic integrity, and has significant associations with park City's past. As a result, it meets the criteria set forth in LMC Chapter 15-11 for designation as a Landmark Site.

5 SIGNIFICANCE

Architect: ☐ Not Known  ☑ Known: Scott & Welch (source: NR nomination)  Date of Construction: 1935

Builder: ☐ Not Known  ☑ Known:  (source: )

The site must represent an important part of the history or architecture of the community. A site need only be significant under one of the three areas listed below:
1. Historic Era:
   - Settlement & Mining Boom Era (1868-1893)
   - Mature Mining Era (1894-1930)
   - Mining Decline & Emergence of Recreation Industry (1931-1962)
   - Other:

   As stated by John McCormick in the 1984 National Register nomination, "the Marsac Elementary School…is significant because it helps document the impact of New Deal programs in Utah, which was one of the states that the Great Depression of the 1930s most severely affected."

2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):

3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect): The Marsac Elementary School was designed by notable architects Carl W. Scott and George W. Welch. These architects also designed the Salt Lake City Masonic Temple, Park City High School, and the Firestone Tire Company building SLC).

The Park Record (Park City, Utah), 1935–36.

Researcher: John McCormick

Date: 1984
Architect/Builder: Carl W. Scott & George W. Welch/unknown

Building Materials: brick

Building Type/Style: PWA Moderne

Description of physical appearance & significant architectural features:
(Include additions, alterations, ancillary structures, and landscaping if applicable)

This school, sitting high on the hill to the east of downtown Park City, is an interesting example of public works architecture in Utah. The building itself is three stories high and is constructed of rock-faced, yellow brick. The roof is flat and there is a low band of terra cotta coping along the edge. The principal facade is symmetrical and it is divided into four bays, each three windows wide. Low relief pilasters separate the bays. Two-story entrance porticos are found between the two middle and the two outside bays. Each portico has a shallow parapet, clipped corners, and decoratively patterned brick surrounding narrow vertical window panels. The principal decorative motif found on the building is a low relief, torch-like figure that is found at the top of each pilaster and at the corners of each portico. These figures break the horizontal line at the edge of the roof and give the building a crenelated appearance. A long concrete stairway runs down the hillside to connect the school to the town below. The stairway's smooth lines and geometric embellishment serve to focus attention on the overall design of the building and should be considered an integral part of this nomination. The school has received little alteration over the years and remains in good original condition.

Statement of Historical Significance:

Built in 1935-36, the Marsac Elementary School is part of the Public Works Buildings Thematic Resources nomination and is significant because it helps document the impact of New Deal programs in Utah, which was one of the states that the Great Depression of the 1930s most severely affected. In 1933 Utah had an unemployment rate of 36 percent, the fourth highest in the country, and for the period 1932-1940 Utah's unemployment rate averaged 25 percent. Because the depression hit Utah so hard, federal programs were extensive in the state. Overall, per capita federal spending in Utah during the 1930s was 9th among the 48 states, and the percentage of workers on federal work projects was far above the national average. Building programs were of great importance. During the 1930s virtually every public building constructed in Utah, including county courthouses, city halls, fire stations, national guard armories, public school buildings, and a variety of others, were built under federal programs by one of several agencies, including the Civil Works Administration (CWA), the Federal Emergency Relief Administration (FERA), the National Youth Administration (NYA), the Works Progress Administration (WPA), or the Public Works Administration (PWA), and almost without exception none of the buildings would have been built when they were without the assistance of the federal government.

The Marsac Elementary School in Park City is one of 233 public works buildings identified in Utah that were built during the 1930s and early 1940s. Only 130 of those 233 buildings are known to remain today and retain their historic integrity. Of the 233, 107 were public school buildings. This is one of 43 elementary schools built, of which 19 are still standing. In Summit County 7 buildings were constructed, 6 of which remain.

(See Continuation Sheet)
Marsac Elementary School
History continued:

This school building was constructed between 1935 and 1936 as a Public Works Administration (PWA) project and officially opened for students on November 15, 1936. It was formally dedicated on December 4, 1936. The architects were Carl W. Scott and George W. Welch of Salt Lake City, who designed more school buildings during the 1930s than any other Utah firm.

Construction of the building was part of a $100,000 building program that the Park City School District undertook in the fall of 1935. Included also in the package was the construction of a new high school mechanical arts building. Scott and Welch also designed it. Construction on the 2 buildings proceeded at the same time, and they were both dedicated at the same time. The mechanical arts building has since been demolished, though the main high school building, which was constructed in 1926, remains standing.

At its dedication the Park City newspaper described the new Marsac School as follows: "The new elementary school contains 24 class room units, 2 general storage rooms, 4 toilet rooms, a boiler plant and coal storage bins. Three of the class room units are devoted to an office suite for principal, nurse and teachers' rest room, and a combination auditorium and playroom. The latter is fitted with small stage with cyclorama and velour curtains and steel folding chairs. Ramps replace stairways, plaster is acoustical throughout, except ramps which are covered with diatite, all floors are covered with battleship linoleum. This combination of acoustical plaster and battleship linoleum renders the building practically noiseless. Building is wired for light, power, fuel, telephone and sound. The latter includes an automatic bell system, operated from a central electric clock, and loud speaker system to serve both auditorium and class rooms, and portable sound picture apparatus. The heating system is automatically controlled both at the generating plant and univent heating outlets. The entire building is of fireproof construction. Steel, reinforced concrete, brick metal lath, and plaster are used throughout. Translucent glass is used in exterior windows. Playgrounds are spacious and adequate. Landscaping and the building approaches are projects for the future."

Approval for funding the building was given at a bond election in Park City on October 19, 1935. Approval was overwhelming: 169 in favor to 12 opposed. Prior to the construction of the school two older schools, Jefferson and Lincoln, were demolished, and materials from them used in construction of the new.

The building's architects, Carl W. Scott and George W. Welch were both prominent Utah architects. Scott was born October 17, 1887, in Minneapolis, Kansas, and graduated in 1907 from the University of Utah with a degree in mining. He was given credit for the idea of the concrete "U" on the hill that is still above the university campus. Following graduation he began a career in architecture as a draftsman for Richard Kletting. In 1914 he became partners with George W. Welch. Welch was born in Denver, Colorado, on May 15, 1886, graduated from Colorado College, and came to Salt Lake City to begin work as an architect. Active in political affairs while here, he was a member of the Utah House of Representatives from 1919 until 1921. Among the buildings that Scott and Welch designed were Salt Lake City's Elks' Club Building, South High School, the Masonic Temple, and many public school

Marsac Elementary School
History continued:

buildings throughout Utah including Hawthorne Elementary School and Bryant Junior High School in Salt Lake, Park City High School, Tooele High School, Blanding High School, and Cedar City Elementary School. They also designed a number of commercial buildings including the N. O. Nelson Manufacturing Company Warehouse, the Nelson-Ricks Creamery Building, and the Firestone Tire Company Building, all in Salt Lake City.
