## 4 ARCHITECTURAL DESCRIPTION & INTEGRITY

**Building Type and/or Style:** Shotgun type / Vernacular style  
**No. Stories:** 1 ½

**Additions:** ☐ none  ☑ minor  ☐ major (describe below)  
**Alterations:** ☐ none  ☑ minor  ☐ major (describe below)

**Number of associated outbuildings and/or structures:** ☐ accessory building(s), # ______; ☐ structure(s), # ______.

**Researcher/Organization:** Preservation Solutions/Park City Municipal Corporation  
**Date:** 12-2008
General Condition of Exterior Materials:

- **Good** (Well maintained with no serious problems apparent.)
- **Fair** (Some problems are apparent. Describe the problems.):
- **Poor** (Major problems are apparent and constitute an imminent threat. Describe the problems.):
- **Uninhabitable/Ruin**

Materials (The physical elements that were combined or deposited during a particular period of time in a particular pattern or configuration. Describe the materials.):

- **Site**: The site includes a retaining wall of wooden boards held with vertical wooden ties. Also, a set of wooden steps leads from the finished road grade to midpoint in the front yard.

- **Foundation**: The foundation is obscured by wood siding and therefore, unable to be verified.

- **Walls**: The exterior walls are clad in non-beveled (drop-novelty) wood siding and corner boards. A single story porch wraps around the north side of the house to the midpoint where it meets a rear shed extension that also projects to the north. The porch is supported by square posts and the balustrade includes narrow turned balusters.

- **Roof**: The roof is a gable form with several shed extensions and is sheathed in asphalt shingles. The chimney is located in one of the rear, shed additions.

- **Windows**: The windows are single double-hung sash units with simple trim casings. The main door is a frame-and-panel door glazed with two narrow vertical lights and a transom window—it is obscured by a screen door. A second door appears to have been cut into the side of the gable adjacent to the original opening.

Essential Historical Form: ☑ Retains  ☐ Does Not Retain, due to:

- **Location**: ☑ Original Location  ☐ Moved (date __________) Original Location:

Design (The combination of physical elements that create the form, plan, space, structure, and style. Describe additions and/or alterations from the original design, including dates—known or estimated—when alterations were made): The house remains largely unchanged from the description in the National Register nomination form completed in 1984 (see USHS Structure/Site Form).

Alterations include the addition of the wrap around porch and small shed extension from the main gable bay to the porch. This porch was added before 1983. The rear additions, built into the hill at the rear of the lot, appear on the 1900 Sanborn map and are assumed to be original.

Setting (The physical environment—natural or manmade—of a historic site. Describe the setting and how it has changed over time.): The house sits nearly eight feet above the finished road grade on approximately 0.06 acres. The rear additions are built into the hill at the back of the lot. Landscaping is informal and includes lawn and deciduous and evergreen trees. The retaining wall with ties appears in the photographs as early as the c. 1940 tax photo. The home is surrounded by house of similar size and scale.

Workmanship (The physical evidence of the crafts of a particular culture or people during a given period in history. Describe the distinctive elements.): The physical evidence from the period that defines this as a typical Park City mining era house are the simple methods of construction, the use of non-beveled (drop-novelty) wood siding, the plan type, the simple roof form, the informal landscaping, the restrained ornamentation, and the plain finishes.

Feeling (Describe the property's historic character.): The physical elements of the site, in combination, convey a sense of life in a western mining town of the late nineteenth and early twentieth centuries.

Association (Describe the link between the important historic era or person and the property.): The shotgun house was not a common house type built in Park City during the mining era, but is the same form as the hall-parlor or gable front house.
This site was nominated to the National Register of Historic Places in 1984 as part of the Park City Mining Boom Era Residences Thematic District, but was not listed because of the owner's objection. It was built within the historic period, defined as 1872 to 1929 in the district nomination. The site retains its historic integrity and would be considered eligible for the National Register as part of an updated or amended nomination. As a result, it meets the criteria set forth in LMC Chapter 15-11 for designation as a Landmark Site.

5 SIGNIFICANCE

Architect: ☑ Not Known ☐ Known: (source: ) Date of Construction: c. 1895

Builder: ☑ Not Known ☐ Known: (source: )

The site must represent an important part of the history or architecture of the community. A site need only be significant under one of the three areas listed below:

1. Historic Era:
   ☑ Settlement & Mining Boom Era (1868-1893)
   ☐ Mature Mining Era (1894-1930)
   ☐ Mining Decline & Emergence of Recreation Industry (1931-1962)

   Park City was the center of one of the top three metal mining districts in the state during Utah’s mining boom period of the late nineteenth and early twentieth centuries, and it is one of only two major metal mining communities that have survived to the present. Park City's houses are the largest and best-preserved group of residential buildings in a metal mining town in Utah. As such, they provide the most complete documentation of the residential character of mining towns of that period, including their settlement patterns, building materials, construction techniques, and socio-economic make-up. The residences also represent the state's largest collection of nineteenth and early twentieth century frame houses. They contribute to our understanding of a significant aspect of Park City’s economic growth and architectural development as a mining community.

2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):

3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect):

**Description of physical appearance & significant architectural features:**
(Include additions, alterations, ancillary structures, and landscaping if applicable)

This is a one and one half story frame building with a gable roof that is oriented toward the street. It cannot be grouped into any particular category of the standard house types of Park City, but it can be visually linked to the hall and parlor house because of its rectangular form and gable roof. And to the shotgun house which, like 835 Empire, is oriented gable end to the street. It has a one story shed extension on the north side, and another across the back of the house which is set into the hillside. The south half of the rear extension has a stone foundation which was probably used as a root cellar. It is unclear whether the extensions are original or whether they are in-period additions. They are included on the 1900 Sanborn Insurance Map, the first map on which the building is identified. The wood siding and window and door of the extensions match those elements of the main block which suggest that the house was built as a single unit. The windows are the one over one light, double hung sash type. If not original, the extensions in no way affect the original character of the one and one half story block. There are two doors at the front of the house, one into the east side of the shed extension, and one into the north side of the main block. A flat roof porch wraps around the northeast corner of the building. It has straight piers and a balustrade of lathe turned posts. The porch is not original, but it was

(See continuation sheet)

**Statement of Historical Significance:**

Built c. 1895, the James Gibson House at 835 Empire is significant as a one of kind house type in Park City. The majority of Park City houses were built as hall and parlor houses, T/L cottages, and pyramid houses or variants of the pyramid house. Shotgun houses and bungalows occur in fewer numbers, but were also significant types. About 20% of the in-period extant buildings in Park City, including 835 Empire, did not specifically fit into any one category or were altered so dramatically that the original type was not identifiable. This house can be visually tied with the shotgun because of its gable end orientation, and to the hall and parlor house because of its gable roofed rectangular form. It, however, differs from both types, and is unlike any other extant house in Park City. It documents the fact that although standard house types were the rule in Park City, exceptions to the standard types were also built. This house is one of only three well preserved examples of houses that are exceptions to the standard type, all of which are included in this nomination.

Construction Date: c. 1895

This house was probably built in the 1890s, but the exact date of its construction and the name of its original owner are not known. The house was built by at least 1900, as indicated by the Sanborn Insurance Maps which first covered this area that year. The first recorded transaction involving this property was in 1905 when James Gibson received title to it as the high bidder in a special auction which involved the sale of over a dozen Park City properties. Gibson bid $150 but had to pay only $75 to assume ownership of this property.

James Gibson was born in Utah in 1870 and came to Park City to engage in mining some time before 1900. The 1900 Census records indicate that at that
835 Empire
Description continued

designed to complement the building and does not affect its original character. The building is in excellent condition.

History continued:

time he was renting a house on Anchor Street. Living with him in that house were his wife Emma, whom he had married in 1898, their infant child, and his brother Alexander. The Gibsons apparently moved into this house in 1905 and owned it until 1947.
