4 ARCHITECTURAL DESCRIPTION & INTEGRITY

Building Type and/or Style: Hall-Parlor Type / Vernacular style
No. Stories: 1

Additions: ☐ none  ☑ minor  ☐ major (describe below)
Alterations: ☐ none  ☑ minor  ☐ major (describe below)

Number of associated outbuildings and/or structures: ☐ accessory building(s), # _____; ☐ structure(s), # _____.

General Condition of Exterior Materials:

☐ Good (Well maintained with no serious problems apparent.)
☐ Fair (Some problems are apparent. Describe the problems.):
☐ Poor (Major problems are apparent and constitute an imminent threat. Describe the problems.):
☐ Uninhabitable/Ruin

Materials (The physical elements that were combined or deposited during a particular period of time in a particular pattern or configuration. Describe the materials.):

Foundation: The 1949 and 1958 tax cards indicate no foundation, but the home underwent rehabilitation between 1983 and 1995 and it is assumed an adequate foundation was added, but has not been verified.

Walls: The exterior walls are clad in non-beveled (drop-novelty) wood siding. A dropped shed-roofed porch spans the front façade with simple square supports. These supports replaced incompatible wrought iron supports visible in the 1983 photo, though were not based on a previous photo because the supports are not visible in the c. 1940 photograph (vegetation completely covers the front façade).

Roof: The house roof and the porch are both sheathed in a standing-seam metal material.

Windows/Doors: The windows are simple two-over-two double-hung sash windows in vertically oriented openings and symmetrically placed on the front façade. The casing is simple in form. The main entry door has been replaced with one that is in keeping with what is traditionally seen in Park City.

Essential Historical Form: ☑ Retains  ☐ Does Not Retain, due to:

Location: ☑ Original Location  ☐ Moved (date __________) Original Location:

Design (The combination of physical elements that create the form, plan, space, structure, and style. Describe additions and/or alterations from the original design, including dates--known or estimated--when alterations were made): The property has undergone some changes since the 1983 NR nomination was completed, excerpted below:

This house is a one story, frame hall and parlor house with a gable roof and a rear shed extension. The facade is generally symmetrical, with a door set slightly off center between the two windows. The door is particularly distinctive, having arch-topped panels. This type of door was common in Utah in the late 1800s, but few remain in Park City houses, and it is particularly unusual to find this type of door on so modest a dwelling. The windows are the double hung sash type with two over two lights. A porch spans the facade, having unique porch piers and a balustrade across the roof-top. The balustrade is not original, but dates within the historic period, and does not affect the original character of the building. Both the house and the extension are sided with drop siding, but the beam between the two sections and the mismatched siding grooves indicate that the extension is not original. The extension dates from within the historic period and does not affect the building's original character. In-period rear extensions are part of Park City's architectural vocabulary. Although in many cases an extension represents a major alteration of the original house, it contributes to the significance of a house because it documents the most common and acceptable method of expansion of the small Park City house.

Subsequent alterations include removal of the distinctive door. It was replaced by a paneled door with single light between 1983 and 1995, but the exact date is unknown. Other in-period changes have been altered, including the removal of the porch roof top balustrade and the siding on the rear that indicated the rear extension. While it is unfortunate that the unique entry door was replaced, these alterations do not affect the character of the site.

Setting (The physical environment--natural or manmade--of a historic site. Describe the setting and how it has changed over time.): The house is constructed on a narrow building pad that sits well above the finished road grade and is accessed via
steep wooden steps. The steep slope of the lot allows for only natural vegetation including deciduous trees and shrubs along with some native grasses. Like most of the historic houses in Park City, the overall setting is a compact urban streetscape with other homes of similar scale within close proximity. Though the proximity of surrounding homes is greater than usually seen because of the severe slope of the surrounding terrain.

Workmanship (The physical evidence of the crafts of a particular culture or people during a given period in history. Describe the distinctive elements.): The distinctive elements that define this as a typical Park City mining era house are the simple methods of construction, the use of non-beveled (drop-novelty) wood siding, the plan type (hall-parlor), the simple roof form, the informal landscaping, the restrained ornamentation, and the plain finishes.

Feeling (Describe the property's historic character.): The physical elements of the site, in combination, convey a sense of life in a western mining town of the late nineteenth and early twentieth centuries.

Association (Describe the link between the important historic era or person and the property.): The Hall-Parlor house form is the earliest type to be built in Park City and one of the three most common house types built in Park City during the mining era.

This site was listed on the National Register of Historic Places in 1984 as part of the Park City Mining Boom Era Residences Thematic District. It was built within the historic period, defined as 1872 to 1929 in the district nomination, and retains its historic integrity. As a result, it meets the criteria set forth in LMC Chapter 15-11 for designation as a Landmark Site.

5 SIGNIFICANCE

Architect: ☐ Not Known  ☑ Known: (source: ) Date of Construction: c. 1885

Builder: ☐ Not Known  ☑ Known: (source: )

The site must represent an important part of the history or architecture of the community. A site need only be significant under one of the three areas listed below:

1. Historic Era:
   ☑ Settlement & Mining Boom Era (1868-1893)
   ☐ Mature Mining Era (1894-1930)
   ☐ Mining Decline & Emergence of Recreation Industry (1931-1962)

   Park City was the center of one of the top three metal mining districts in the state during Utah's mining boom period of the late nineteenth and early twentieth centuries, and it is one of only two major metal mining communities that have survived to the present. Park City's houses are the largest and best-preserved group of residential buildings in a metal mining town in Utah. As such, they provide the most complete documentation of the residential character of mining towns of that period, including their settlement patterns, building materials, construction techniques, and socio-economic make-up. The residences also represent the state's largest collection of nineteenth and early twentieth century frame houses. They contribute to our understanding of a significant aspect of Park City's economic growth and architectural development as a mining community.2

2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):

3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect): This house is architecturally significant as one of the extant hall-parlor houses in Park City.

1900 Census Records. Summit County, Park City Precinct.
This house is a one story, frame hall and parlor house with a gable roof and a rear shed extension. The facade is generally symmetrical, with a door set slightly off center between the two windows. The door is particularly distinctive, having arch-topped panels. This type of door was common in Utah in the late 1800s, but few remain in Park City houses, and it is particularly unusual to find this type of door on so modest a dwelling. The windows are the double hung sash type with two over two lights. A porch spans the facade, having unique porch piers and a balustrade across the roof top. The balustrade is not original, but dates within the historic period, and does not affect the original character of the building. Both the house and the extension are sided with drop siding, but the seam between the two sections and the mismatched siding grooves indicate that the extension is not original. The extension dates from within the historic period and does not affect the building’s original character. In-period rear extensions are part of Park City’s architectural vocabulary. Although in many cases an extension represents a major alteration of the original house, it usually contributes to the significance of a house because it documents the most common and acceptable method of expansion of the small Park City house. No alterations have been made which affect the original character of the building.

Built c. 1885, the Carl G. Johnson House at 147 Grant is architecturally significant as one of 76 extant hall and parlor houses in Park City, 22 of which are included in this nomination. The hall and parlor house, the earliest house type to be built in Park City, and one of the three most common house types that were built during the early period of Park City’s mining boom era, significantly contributes to the character of the residential area.

This house was built by at least 1889, as indicated by the Sanborn Insurance Maps, but the exact date of its construction and the name of its original owner are unknown. The first recorded transaction involving this property was in 1916, when the Park City Townsite Corporation granted title to the property to Carl G. Johnson as part of their effort to clear up the "extensive property muddle" which had persisted in Park City for almost 40 years. The property muddle came about because many early settlers opposed the townsite proposal and refused to follow legal procedures for owning property.

The Johnsons, about whom nothing is known, probably lived in the house for at least a few years before they received legal title to the property in 1916. Subsequent owners of the house include Andy Vik (1920-24), J.H. Holst (1924-31), and Joe Grover (1931-40). This area along Grant Avenue was part of the Finnish neighborhood in Park City around the turn of the century. ¹
