### 4 ARCHITECTURAL DESCRIPTION & INTEGRITY

**Building Type and/or Style:** Pyramid House  
**No. Stories:** 1  
**Additions:** ☐ none ☐ minor ☑️ major (describe below)  
**Alterations:** ☐ none ☑️ minor ☐ major (describe below)

**Researcher/Organization:** Preservation Solutions/Park City Municipal Corporation  
**Date:** 12-2008
Number of associated outbuildings and/or structures: ☐ accessory building(s), # _____; ☐ structure(s), # _____.

General Condition of Exterior Materials:
- ☑ Good (Well maintained with no serious problems apparent.)
- ☐ Fair (Some problems are apparent. Describe the problems.)
- ☐ Poor (Major problems are apparent and constitute an imminent threat. Describe the problems.)
- ☐ Uninhabitable/Ruin

Materials (The physical elements that were combined or deposited during a particular period of time in a particular pattern or configuration. Describe the materials.):
- Site: Dry-stacked retaining wall.
- Foundation: Not verified.
- Walls: Drop siding.
- Roof: Truncated hipped roof sheathed in standing-seam metal.

Essential Historical Form:
- ☑ Retains  ☐ Does Not Retain, due to:

Location: ☑ Original Location  ☐ Moved (date __________) Original Location:

Design (The combination of physical elements that create the form, plan, space, structure, and style. Describe additions and/or alterations from the original design, including dates–known or estimated–when alterations were made): The one-story frame pyramid house remains a was described in the 1983 National Register nomination form (see Structure/Site Form, 1983).

Subsequent alterations are the addition on the rear and southeast façade that extend into a garage with living space above. Information found in the preservation files of the Utah State Historical Society state that the additions were reviewed as part of a tax credit application by the State Historic Preservation Office and were found to be minor and do not affect the integrity of the site.

Setting (The physical environment–natural or manmade–of a historic site. Describe the setting and how it has changed over time.): The setting has not changed significantly. The additions with garage appears to have been constructed where an 18'x18', two car garage had been located (according to the tax card).

Workmanship (The physical evidence of the crafts of a particular culture or people during a given period in history. Describe the distinctive elements.): The physical evidence from the period that defines this as a typical Park City mining era house are the simple methods of construction, the use of non-beveled (drop-novelty) wood siding, the plan type, the simple roof form, the informal landscaping, the restrained ornamentation, and the plain finishes.

Feeling (Describe the property's historic character.): The physical elements of the site, in combination, convey a sense of life in a western mining town of the late nineteenth and early twentieth centuries.

Association (Describe the link between the important historic era or person and the property.): The Pyramid house is one of the three most common house types built in Park City during the mining era.

This site was listed on the National Register of Historic Places in 1984 as part of the Park City Mining Boom Era Residences Thematic District. It was built within the historic period, defined as 1872 to1929 in the district nomination, and retains its historic integrity. As a result, it meets the criteria set forth in LMC Chapter 15-11 for designation as a Landmark Site.

5 SIGNIFICANCE
Architect: ☐ Not Known  ☐ Known:  (source: )  Date of Construction: c. 1898¹

Builder: ☐ Not Known  ☐ Known:  (source: )

The site must represent an important part of the history or architecture of the community. A site need only be significant under one of the three areas listed below:

1. Historic Era:
   □ Settlement & Mining Boom Era (1868-1893)
   ☑ Mature Mining Era (1894-1930)
   □ Mining Decline & Emergence of Recreation Industry (1931-1962)

   Park City was the center of one of the top three metal mining districts in the state during Utah's mining boom period of the late nineteenth and early twentieth centuries, and it is one of only two major metal mining communities that have survived to the present. Park City's houses are the largest and best-preserved group of residential buildings in a metal mining town in Utah. As such, they provide the most complete documentation of the residential character of mining towns of that period, including their settlement patterns, building materials, construction techniques, and socio-economic make-up. The residences also represent the state's largest collection of nineteenth and early twentieth century frame houses. They contribute to our understanding of a significant aspect of Park City's economic growth and architectural development as a mining community.²

2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):

3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect):

Researcher: Roger Roper

Date: 4/84
This house is a one story frame pyramid house with a truncated pyramid roof. Typical of the pyramid house is the square plan, the generally symmetrical facade with a door set slightly off-center between windows, and the hip roof porch. What distinguishes this house from others of the type is the use of decorative features on the facade. Many pyramid houses have simple, unadorned facades, but Victorian moldings around the door and paired windows and a decorative porch distinguish the house at 363 Park. Grooved moldings with decorative corner blocks such as those on this house are typical of the period of construction. The porch is one of the most ornate of those on Park City's pyramid houses that have survived to the present. It has a shed roof, and is supported on lathe turned porch piers. There is a frieze of jigsaw cut ornament across the facade, and a pediment-shaped projection centered over the entrance bay. Decorative brackets top the porch piers, and there is a band of teardrop-shaped decorative points below the frieze. The original balustrade was replaced by a simple, unadorned bannister of two-by-fours. It is a practical and unobtrusive alteration. There is a rear shed extension and a small side extension attached to the north wall. The Sanborn Insurance Map indicates that both extensions were built before 1900. Matching drop siding was used so that the extensions complement the building, and do not affect its (See continuation sheet)

Built c. 1898, the Walter and Ann Wilcocks House at 363 Park is architecturally significant as one of 69 extant pyramid houses in Park City, 28 of which are included in this nomination. Of the 28 being nominated, eleven are true pyramid houses and seventeen are variants of the basic type. This house is one of the true pyramid houses. The pyramid house is one of the three most common house types built during the early period of Park City's mining boom era, and significantly contributes to the character of the residential area. It appeared early on, but survived with variations longer than the other two types.

This house was probably built c. 1898 by Walter and Ann Wilcocks to replace their two-story frame house which had apparently been destroyed in the great fire of June 19, 1898. The Wilcocks also owned a rental house at 343 Park, which was also apparently destroyed by the fire and was replaced at about the same time with a new house, similar to this house, but smaller and less elaborate. The Wilcocks owned this house until Ann's death in 1930, at which time it was deeded to Ann's nephew, William J. Scoble.

Walter and Ann Wilcocks were born in England, he in 1840 and she in 1845. They immigrated to the U.S. in 1865, one year after their marriage, and came to Park City in 1877 where they remained for the rest of their lives. By at least 1880, Walter was operating a hotel in the town and had purchased the property on which this house stands. He was also involved in real estate investments in the town (see 343 Park), and, like almost everyone else in the town, probably had some mining interests as well. He died of Bright's disease in 1900. The Wilcocks had no children. Ann Wilcocks continued to live in this house after Walter's death, sharing the home for a time with her nephew, William J. Scoble, who, in 1905, purchased her rental house at 343 Park. Ann, (See continuation sheet)
363 Park
Description continued:

original character. In-period rear extensions are part of Park City's architectural vocabulary. Although in many cases an extension represents a major alteration of the original house, it usually contributes to the significance of a house because it documents the most common and acceptable method of expansion of the small Park City house. This house is in excellent condition, and maintains its original integrity.

History continued:

listed in the 1900 census records as a "capitalist," was apparently active in various investments herself.

Other owners of the house include William J. Scoble (1930-32) and Robert Browning Cunningham and family (1932-57).
