

Has Your Home or Business Been Closed for Weeks?

Flush the Water Pipes.

The Park City Municipal Corporation Water Division delivers drinking water through a network of pipes to your home or business. After the water flows through a meter, home or business owners are responsible for maintaining water quality. Flushing the water lines is an easy way to help maintain quality by moving the older water out of the pipes and bringing in fresh, high-quality water.

Remember to turn off all faucets and reset the water heater.
