4 ARCHITECTURAL DESCRIF			
Building Type and/or Style: T/L			No. Stories: 1 ½
Additions: ☐ none ☑ minor ☐	-		-
Number of associated outbuilding	igs and/or structures: □	l accessory building(s), #	; structure(s), #
General Condition of Exterior Ma	aterials:		

Researcher/Organization: Dina Blaes/Park City Municipal Corporation Date: November, 08

☑ Good (Well maintained with no serious problems apparent.)
☐ Fair (Some problems are apparent. Describe the problems.):
☐ Poor (Major problems are apparent and constitute an imminent threat. Describe the problems.):
☐ Uninhabitable/Ruin
Materials (The physical elements that were combined or deposited during a particular period of time in a particular pattern or configuration. Describe the materials.):
Site: Lot rises from north to south. No visible significant site features.
Foundation: Tax cards indicate none, but unverified.
Walls: Wood drop siding. Partial-width inset porch enclosed with multi-pane casement windows.
Roof: Cross-wing form sheathed in asphalt shingles.
Windows: Double-hung sash type and multi-pane casements.
Essential Historical Form: ☑ Retains ☐ Does Not Retain, due to:
Location: ☑ Original Location ☐ Moved (date) Original Location:
Design (The combination of physical elements that create the form, plan, space, structure, and style. Describe additions and/or alterations from the original design, including datesknown or estimatedwhen alterations were made): This frame T/L cottage has remained unaltered from the description provided in the National Register nomination (see Structure/Site Form, 1983).
Minor changes that occurred prior to NR nomination include window replacement from two-over-two double-hung to single double hung windows, the upper window in the gable end was added, and the porch was enclosed (believed to be during the historic period).
Setting (The physical environmentnatural or manmadeof a historic site. Describe the setting and how it has changed over time.): The setting remains as it was in the tax photo and later photos. Like many of Park City's historic homes, the side yards are narrow and the house is surrounded by homes of similar size and scale.
Workmanship (The physical evidence of the crafts of a particular culture or people during a given period in history. Describe the distinctive elements.): The physical evidence from the period that defines this as a typical Park City mining era house are the simple methods of construction, the use of non-beveled (drop-novelty) wood siding, the plan type, the simple roof form, the informal landscaping, the restrained ornamentation, and the plain finishes.
Feeling (Describe the property's historic character.): The physical elements of the site, in combination, convey a sense of life in a western mining town of the late nineteenth and early twentieth centuries.
Association (Describe the link between the important historic era or person and the property.): The "T" or "L" cottage (also known as a "cross-wing") is one of the earliest and one of the three most common house types built in Park City during the mining era.
This site was listed on the National Register of Historic Places in 1984 as part of the <i>Park City Mining Boom Era Residences Thematic District</i> . It was built within the historic period, defined as 1872 to1929 in the district nomination, and retains its historic integrity. As a result, it meets the criteria set forth in LMC Chapter 15-11 for designation as a Landmark Site.
5 SIGNIFICANCE
Architect: ☑ Not Known ☐ Known: (source:) Date of Construction: c. 1905
Builder: ☑ Not Known ☐ Known: (source:)

The site must represent an important part of the history or architecture of the community. A site need only be significant under one of the three areas listed below:

	 					_		
1	 н	ıcı	t۸	rı	\sim	Е	ra	٠
	 				ι,	_	n	

☐ Settlement & Mining Boom Era (1868-1893)

☑ Mature Mining Era (1894-1930)

☐ Mining Decline & Emergence of Recreation Industry (1931-1962)

Park City was the center of one of the top three metal mining districts in the state during Utah's mining boom period of the late nineteenth and early twentieth centuries, and it is one of only two major metal mining communities that have survived to the present. Park City's houses are the largest and best-preserved group of residential buildings in a metal mining town in Utah. As such, they provide the most complete documentation of the residential character of mining towns of that period, including their settlement patterns, building materials, construction techniques, and socio-economic make-up. The residences also represent the state's largest collection of nineteenth and early twentieth century frame houses. They contribute to our understanding of a significant aspect of Park City's economic growth and architectural development as a mining community.¹

- 2. Persons (Describe how the site is associated with the lives of persons who were of historic importance to the community or those who were significant in the history of the state, region, or nation):
- 3. Architecture (Describe how the site exemplifies noteworthy methods of construction, materials or craftsmanship used during the historic period or is the work of a master craftsman or notable architect):

Building Type/Style:

T/L Cottage

Description of physical appearance & significant architectural features:

(Include additions, alterations, ancillary structures, and landscaping if applicable)

This house is a one story frame T/L cottage with a gable roof. An open porch originally spanned the west side of the stem-wing. It was enclosed at some time within the historic period. Careful attention was paid to matching the frame siding of the porch with the siding of the original house, and to using windows that are compatible with the character of the building. A small one over one double hung sash window is centered over two windows of the same type on the gable end of the cross-wing. The small window is not original, but was added to make attic space available for use. It is an unobtrusive alteration. Access to the interior of the house is through a door off the enclosed porch into the south side of the cross-wing. There is a large single pane window on the stem-wing. The square and rectangular windows on the south side of the building may not be original, but they, too, are unobtrusive alterations. There is a shed roof rear extension which, according to the Sanborn Insurance Map of 1900, was added sometime between 1889 and 1900. In materials and scale it is compatible with the original house. In-period rear extensions are part of Park City's architectural vocabulary. Although in many cases an extension represents a major alteration of the original house, it usually contributes to the significance of a house because it documents the most common and acceptable method of expansion of the small Park City house. (See continuation sheet)

 ${\bf Statement\ of\ Historical\ Significance:}$

Construction Date: c. 1880

Built c. 1880, the Wilson I. Snyder House at 1010 Woodside is architecturally significant as one of 78 extant T/L cottages in Park City, 17 of which are included in this nomination. The T/L cottage is one of the three most common house types built during the early period of Park City's mining boom era, and significantly contributes to the character of the residential area. This house is also historically significant as the only house in Park City known to be associated with Wilson I. Snyder, a prominent attorney and mining man in Park City and the state for almost fifty years.

This house was built before 1889, as indicated by the Sanborn Insurance Maps, possibly having been constructed as early as the late 1870s for Wilson I. Snyder. 1880 census records indicate that Snyder was living in a house near this location at that time. Although Snyder did not receive legal title to this and surrounding property until 1890, it was not uncommon during the early decades of Park City's settlement for individuals to build houses on property which they had obtained through informal rather than official transactions. Snyder continued to own this property until 1918, although he probably began using it as rental property in the mid-1880s. It is unknown whether Snyder ever lived in this house, but, since records do not indicate that he owned many other houses in Park City, it is likely that he did live here. Other houses that he is known to have owned have apparently been demolished, including the house he had built in 1886 behind his office on Main Street, and the two story frame house, also on Main Street, which he had built in 1898 after the great fire which destroyed that part of town.

Wilson I. Snyder was born in 1856 near Salt Lake City, and began studying law at the age of 18. He was admitted to the bar in 1878, and opened an office soon after in Park City. Park City was just a few miles away from the farming community of Snyderville which had been founded by his relatives. He served (See continuation sheet)

STORY 5

1010 Woodside Description continued:

Although major changes have been made to the exterior of this building, they reflect typical methods of expansion of the small mining cottage, and all of the changes were made so that the building retains its original character.

History continued:

for a time as Park City Attorney and also as Summit County Attorney. While in Park City he was very active in the leadership and affairs of the local Independent Order of Odd Fellows lodges, and eventually became a grand master in that organization. On 1901, he moved to Salt Lake City to organize a law firm there, but continued to be involved in Park City through his real estate and mining investments, and various legal matters. He served as the representative of the Park City Townsite Corporation in 1916 when they attempted to clear up the "extensive property muddle" by granting clear title to the occupants of numerous properties which had never been legally purchased from the Townsite Corporation, but which had changed hands through unofficial transactions for over 40 years. W.I. Snyder served as president of the Utah Bar Association in 1908, wrote several important articles on mining and mining law, and was an instructor of mining at the University of Utah for a time. He served for many years as vice-president, director and general counsel for the Tintic Standard Mining Company. He died at his home in Salt Lake City (1351 E. 100 S.) in 1930. Preceding him in death were his first two wives. Cynthia Brown Snyder (d.1881), whom he had married in 1877 and who bore him at least two children, and Elizabeth Wells Arrick Snyder, who died in 1921.
